FIG. 10

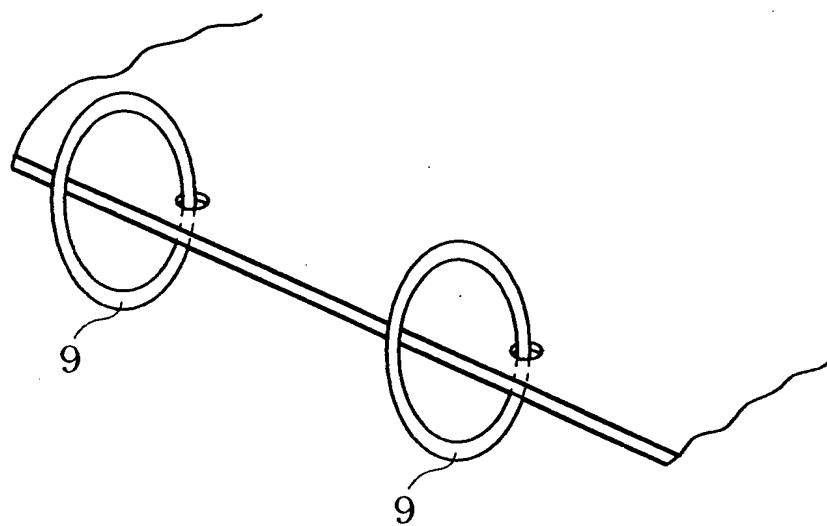

FIG. 11

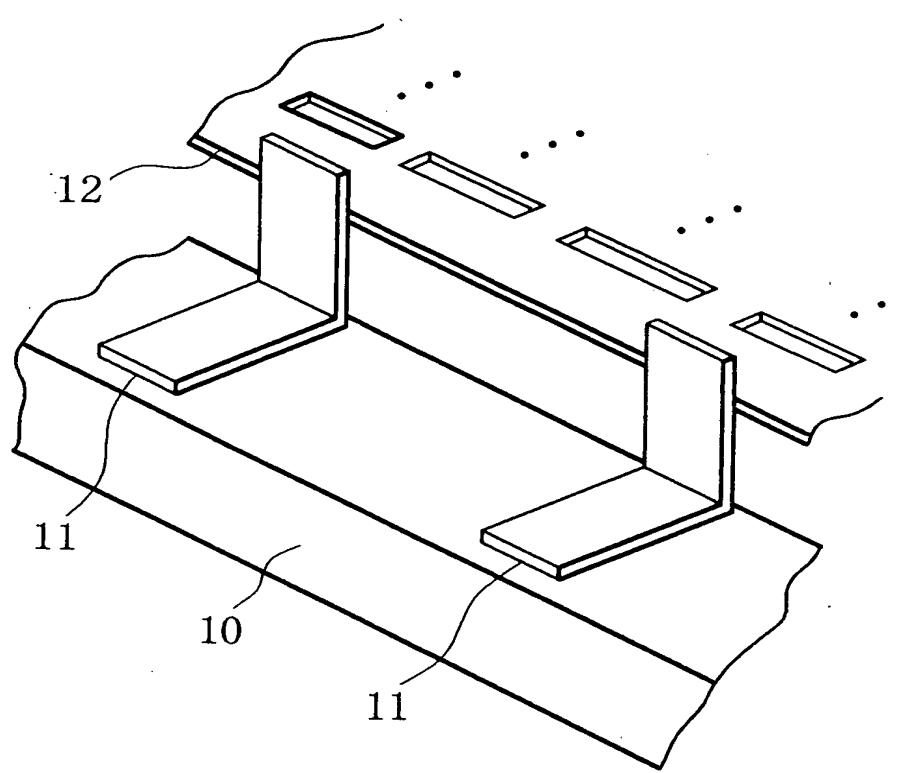

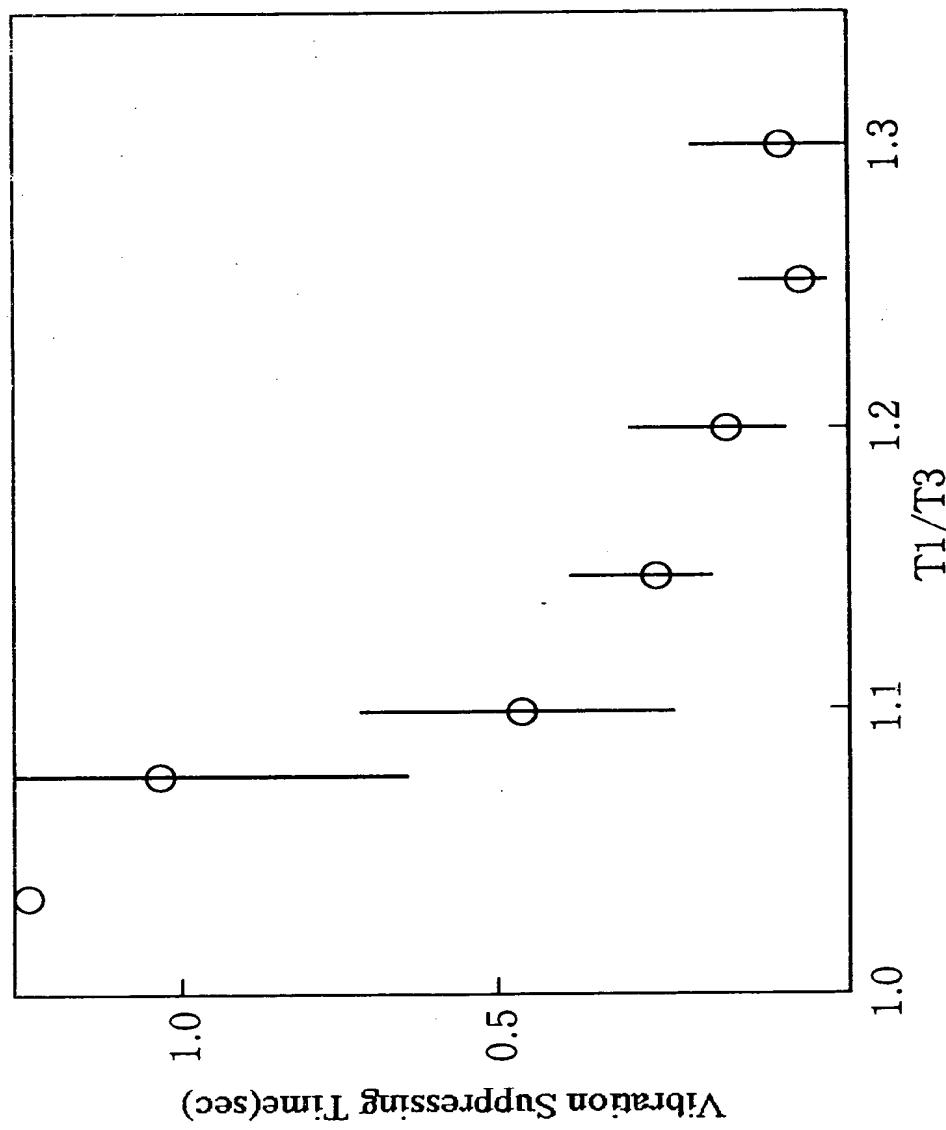

FIG. 12

A vibration suppressing time means a time required for
attenuating the amplitude of vibration to not more than 1/10

FIG. 13A

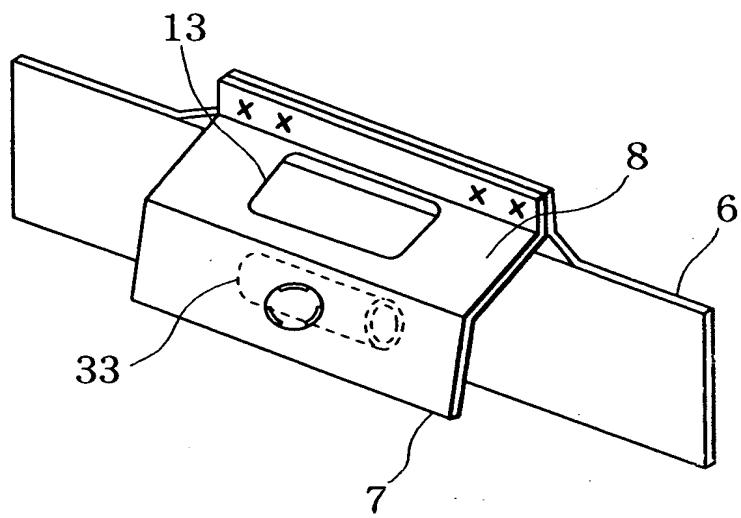

FIG. 13B

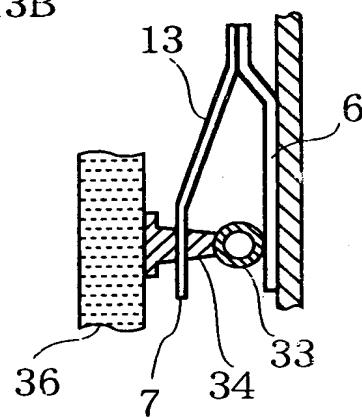

FIG. 14A

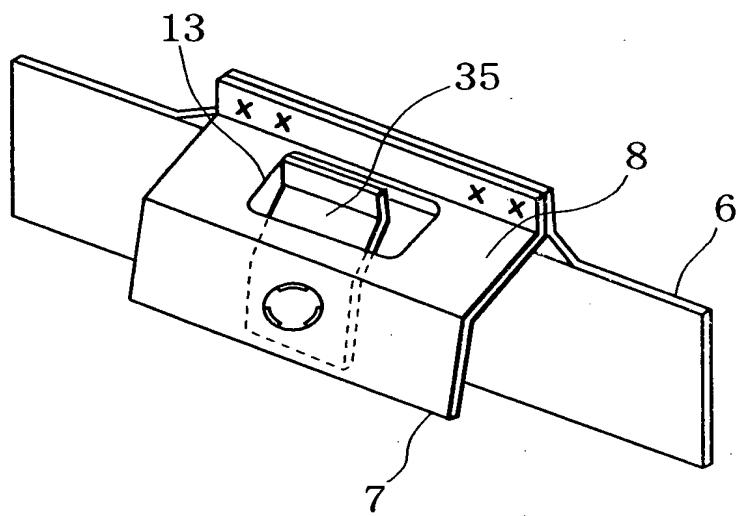

FIG. 14B

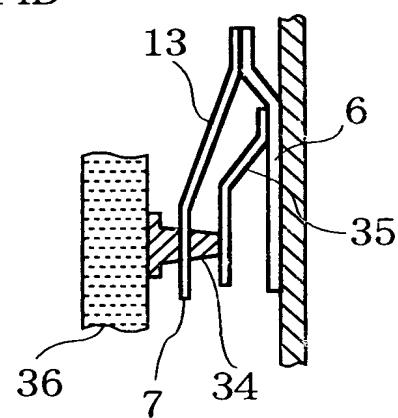

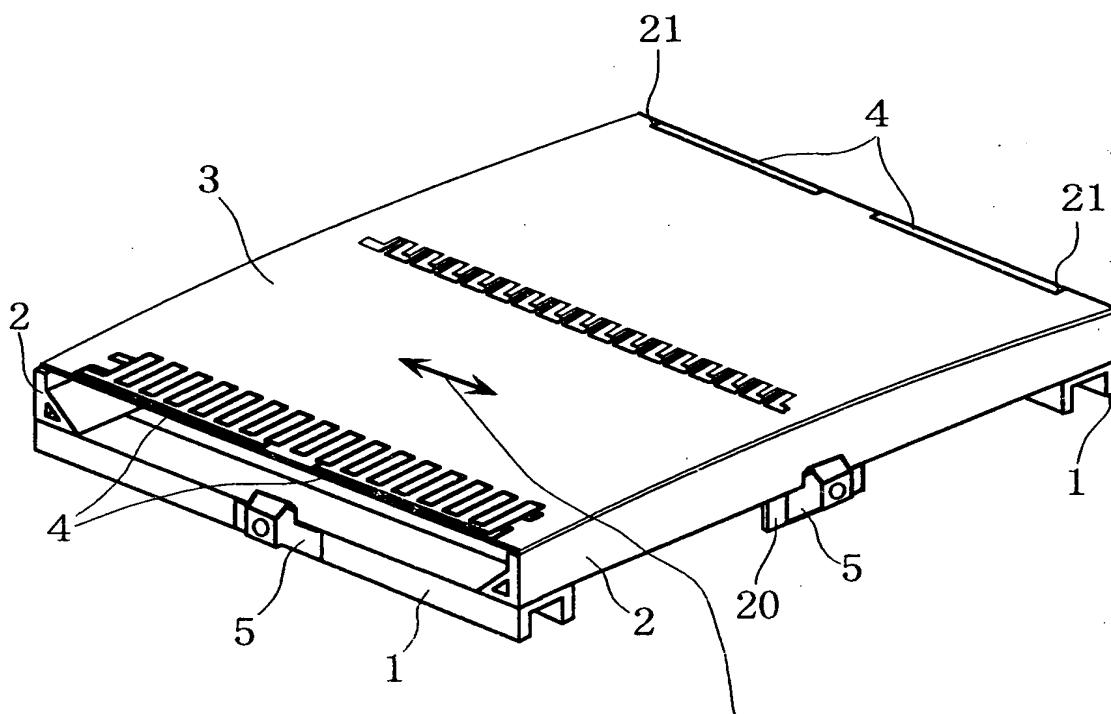

FIG. 15

Direction in which a tensile force is applied

FIG. 16

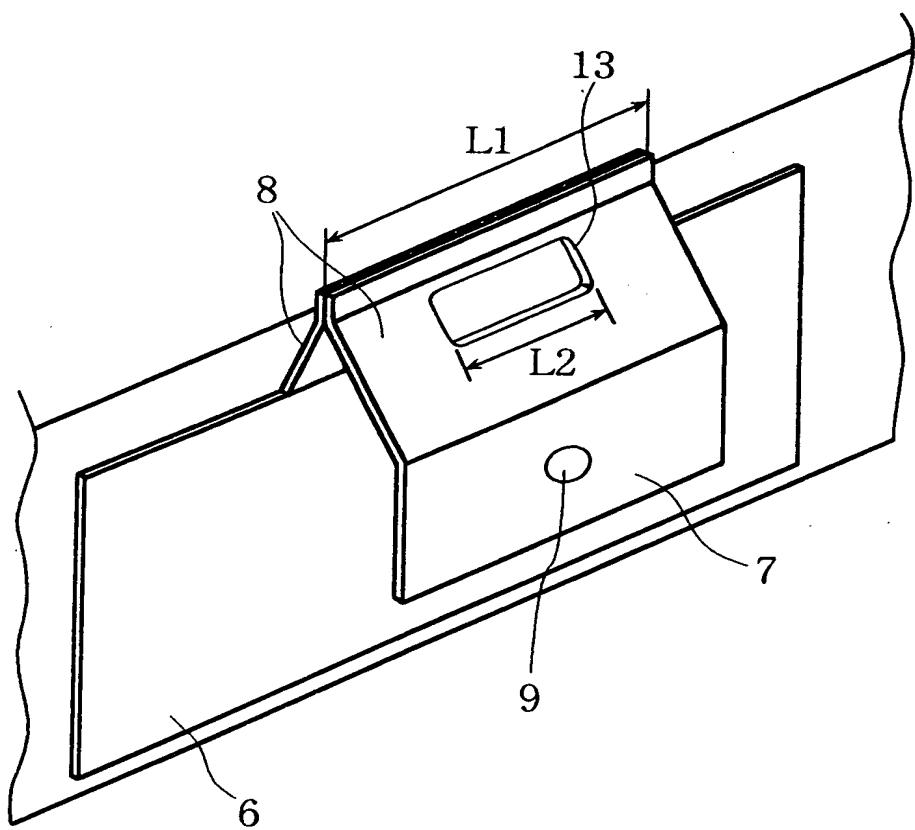

FIG. 17A

Condition of frame vibration when all of the spring constants are identical ($k=1.2 \text{ kgf/mm}$)

Tapping

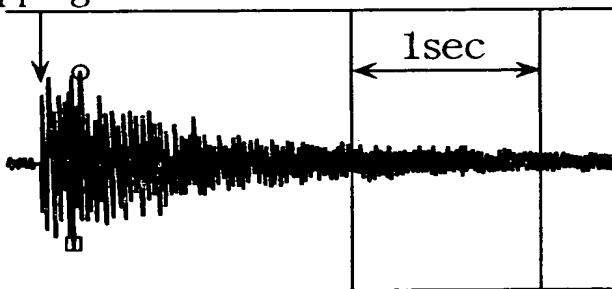

FIG. 17B

Condition of frame vibration when a combination of spring constants of $k = 1.2 \text{ kgf/mm}$ and $k = 0.2 \text{ kgf/mm}$ is employed

Tapping

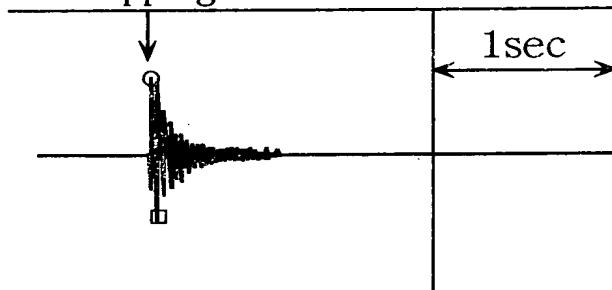

FIG. 18

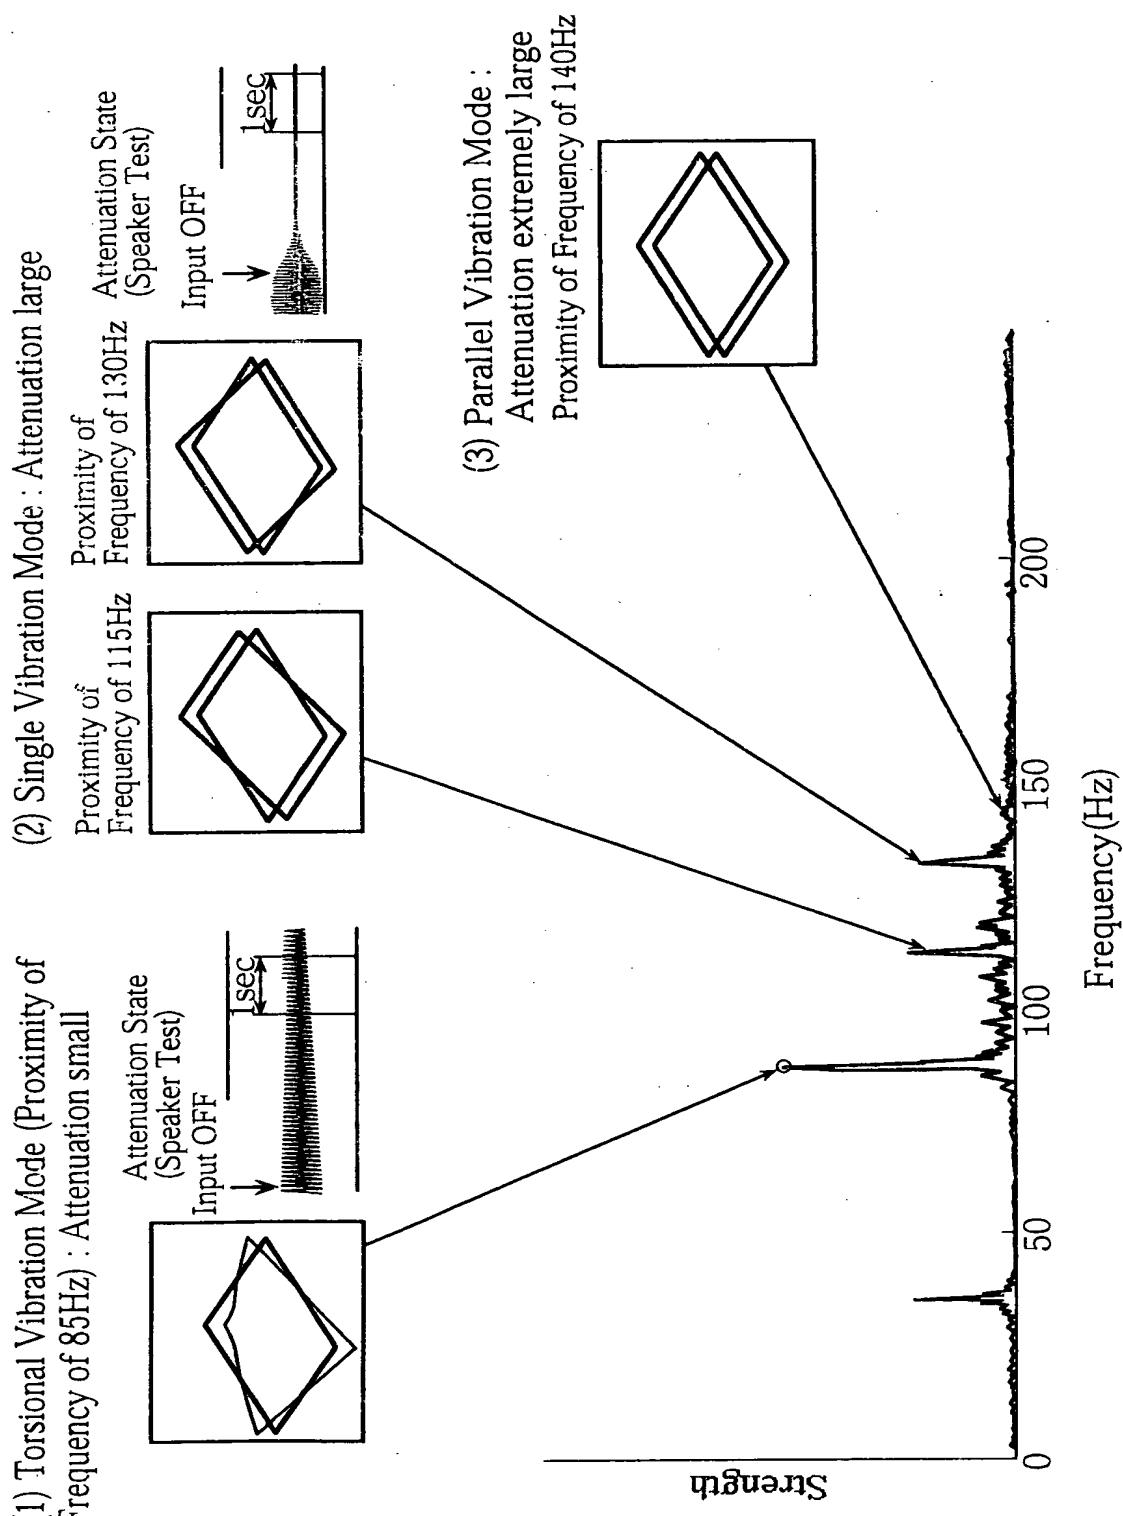

FIG. 19

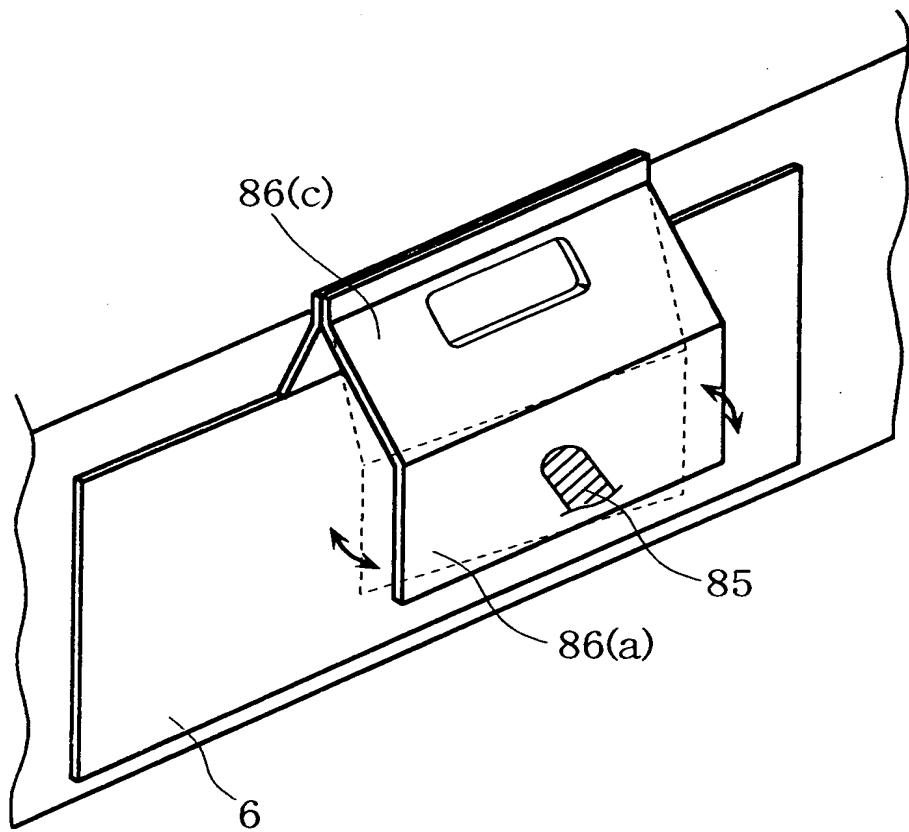

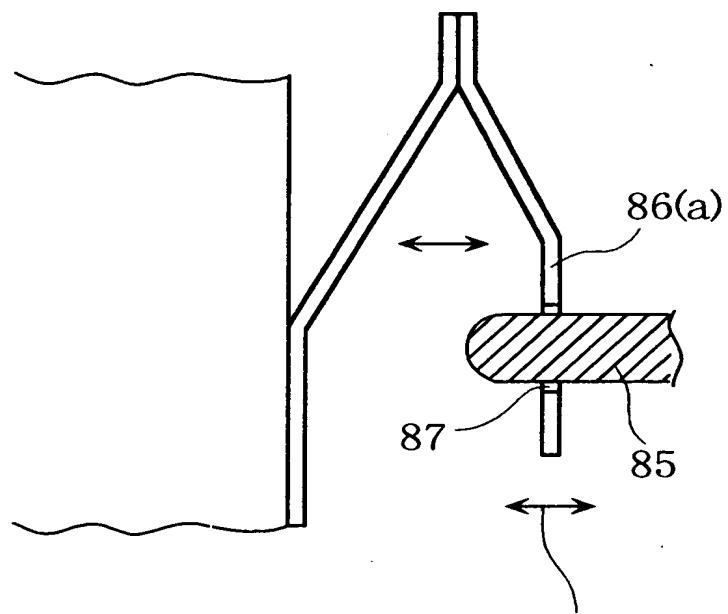

FIG. 20

Direction of Movement of the Spring

FIG. 21
